Aneel Kumar Muppana

Innovative Software Developer with 1+ years of experience in Python, Java, and Full Stack Web Development, combining strong expertise in Django, REST APIs, and Data Science. Skilled in Data Processing, ML model development, LLM integration, NLP Integration, Neural networks and Generative AI, Agentic AI Frameworks with hands-on experience in FastAPI, Streamlit, Falsk and modern DevOps tools Git/GitHub, CI/CD. Passionate about building end-to-end intelligent applications that blend scalable architecture with data-driven insights.

EDUCATION

Kuppam Engineering Collage

Bachelor of Technology(ECE) - 7.89 Dec 2021 - June 2024

Government Polytechnic Collage

Diploma In Electronics and Communication - 8.2 July 2018 - Sep 2021

SKILLS

Programming: Python, Java, SQL
Data Science & AI: Data Preprocessing, EDA, Statistics, Machine Learning, Deep Learning, NLP Generative AI, LLM Integration, Streamlit, Gradio, Falsk
Farmeworks/Libraies: Numpy,Pandas, Matplotlib, Seaborn, Scipy, Scikit-Learn, XGBoost, FastAPI, PyTorch, NLTK, spaCy TensorFlow, Gensim, Transformers, LangChain, OpenAI
Web Development: Django REST Framework(DRF), Springboot, HTML5, CSS3, RESTful APIs
Databases: MySQL, PostgreSQL, MangoDB
Tools & Practices: Git/GitHub, Cursor ai, Power BI, Tableau, PyCharm, Vs Codes, Spyder, Google Colb
DevOps: CI/CD, Git Actions, Workflows, Docker, Kubernets
Key Expertise: Data Cleaning & Transformation, Model Building & Evaluation, API Development, Real-time Web Applications, GenAI-based Image Generation, End-to-End ML Pipeline Development
Soft Skills: Adaptability, Problem-solving, Collaborative

WORK EXPERIENCE

IMCS Tech Private LTD.

Associate Software Developer April 2025 - Present

- Design, develop, and maintain **Python/Django-based web applications** with a focus on **authentication, CRUD operations**, and **role-based access control**.
- Collaborate with senior developers to deliver **scalable, high-performance solutions** aligned with project requirements.
- Perform **debugging, testing, and performance optimization** to ensure code reliability and efficiency.
- Work extensively with **SQLite, PostgreSQL, and MySQL** for **database schema design, query optimization**, and data handling.
- Utilize **Git/GitHub** for version control, managing branches, pull requests, and code reviews to maintain clean and organized repositories.
- Follow **Agile methodologies** and participate in **daily stand-ups, sprint planning, and retrospectives** to ensure smooth project execution.
- Maintain **comprehensive documentation** for features, workflows, and deployments to support long-term maintainability.

PROJECTS

Personal Chat Application June 2025 - Present

Personal Chat Application (Python, Django, ReactJS, LLMs, Generative AI)

- Developed a real-time **chat application** integrating **Large Language Models (LLMs)** for intelligent and context-aware responses.
- Implemented **Python (Django)** as the backend for authentication, API handling, and AI model integration.
- Implemented One-to-One, One-to-Multiple Chats using WebSocket and Django Channels with Redis server.
- Built a modern **ReactJS frontend** for responsive UI/UX with seamless real-time messaging.
- Added features like **user authentication, personalized chat history, and AI-driven conversations**.
- Showcased expertise in **full-stack development, AI integration, and real-time communication systems**.

Bank managements System April 2025 - June 2025

Bank Management System (Python, Django, SQLite/PostgreSQL)

- Developed a **full-featured banking application** to manage customers, accounts, and transactions efficiently.
- Implemented **user authentication, registration, and role-based access control (Admin/User)** for secure operations.
- Built **CRUD functionalities** for customers and transactions with validation and error handling.
- Added advanced features: **real-time notifications, interactive dashboards, pagination, and PDF/CSV export**.
- Enhanced usability with **search, filters, and auto-close success/error messages**.
- Implemented **date-wise bank statement generation with print/download functionality**.
- Demonstrated expertise in **full-stack web development, Django ORM, database design, and scalable front-end integration**.

Spam Message Detection Sep 2025 - Oct 2025

- **Developed** a Spam Message Detection System using Python and machine learbing framework like Scikit-learn to accurately classify SMS messages as spam or not spam.
- **Implemented** advanced text preprocessing and **TF-IDF vectorization**, achieving an accuracy of **~95%** on real-world data.
- **Designed** and deployed an interactive **Streamlit web app** for real-time predictions with an elegant, user-friendly interface.

CERTIFICATE

Introduction to Large Language Models (LLM) | Google

- Gained foundational knowledge of **Large Language Models**, their architecture, training methods, and real-world applications in **Generative AI** and **Natural Language Processing (NLP)**.

Introduction to Generative AI | Google

- Learned the fundamentals of **Generative AI**, including how AI models create new content such as text, images, and code, along with key concepts behind **machine learning and creativity in AI systems**.

Introduction to Generative AI Studio | Google

- Learned to use **Google's Generative AI Studio** for creating and experimenting with AI models, focusing on **prompt engineering, text generation**, and real-world **Generative AI applications**.
